WeatherXL™ Silicone Polyester Coatings

Valspar's WeatherXL™ silicone polyester coatings are ideal for a variety of metal building applications including agricultural, industrial, commercial, and pre-engineered metal building components and systems.

These coatings provide the exterior color and gloss durability as well as the chalking and chemical resistance that is demanded by these markets through a unique chemistry that combines durable ceramic and other select inorganic pigments with a breakthrough, proprietary resin technology.

Applicators and contractors will benefit from its superior abrasion resistance that allows WeatherXL™ silicone polyester coatings to endure the normal physical abuses that can occur in transit, application, and construction.

Valspar manufactures WeatherXL™ coatings in a wide range of standard colors. Many of these colors are formulated to meet ENERGY STAR®, LEED® and Title 24® guidelines for cool roofs.

All colors shown are within the limits of color chip reproduction.
